aaBridge - Version 2.2

aaBridge is a non-network Bridge playing program

It is intended for beginners and those practicing their card counting skills. It selects strong hands and lets the user play them.

It is also a multi platform (Windows, Mac & Linux) .lin file player.

This edition, called the **aaBridge Watson Edition**, includes an active display presentation of the book - Watson's Play of the Hand at Bridge - which has been sourced from the [HondoBridge](#) website.

New feature v2.2 - Card Counting, Training and Exam.

A windows installer is available, click the **.exe** link in the table below. Mac and Linux users can download the .jar and run it directly.

Name - aaBridge Watson Edition	Ver	Build	Released	Downloads
Installer for Windows	2.2.0	2304	2014 Apr 08	.exe
Single jar for Mac / Linux	2.2.0	2304	2014 Apr 08	.jar

Go to

<http://rogerpf.com/aaBridge>

The page should look something like the image.

Click the **.exe** link shown ringed in purple above.

The file with a name like **aaBridge_4.0.0.3128_setup.exe** will now start to download.

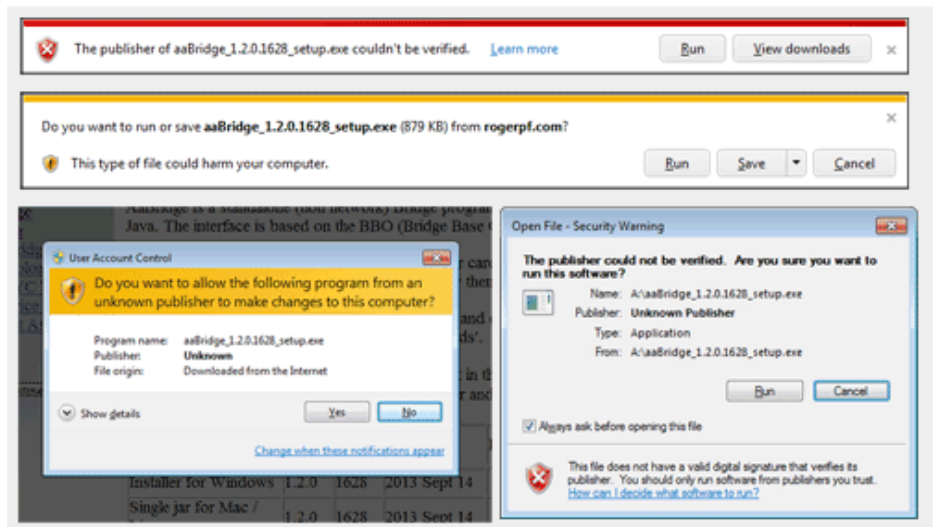

<end of page>

Warnings Warnings Warnings – what are they all about ?

Your computer will warn you about installing **aaBridge**. This is sound advice you should not proceed unless you trust this software. This is true for any software you are installing. Did you get this document from a reputable place? Has it been recommend to you? Do you know people who use it?

Why all these warnings!

Only proceed if you have decided that you trust the **aaBridge** program.

Choose **Run** or **Save**

A this point different browsers will ask different things. If you are offered a **Run** option choose that. If you only get offered **Save** then choose that. If your browser won't offer you either – time to use a different browser to do this.

Chrome will instead always show the file downloading, icon in the bottom left. You can then click on it to run it or click the down-arrow then - **Show in folder** to see the downloads.

<end of page>

If you have previously selected the **Save** option, you now need to open your **downloads** folder and **double click** on the **aaBridge.....exe** file.

If you cannot see the **.exe** and **.ln** extensions on filenames (and you want to) then this [how-to](#) from Microsoft will show you how to see them.

<http://windows.microsoft.com/en-us/windows/show-hide-file-name-extensions>

Java

aaBridge will now be installing. At some point (possibly after a warning or two) if you have never installed Java (most people have) you will be whisked away in a browser to the Big corporate land of **ORACLE** and asked to install Java.

You will need to click the **Free Java download** button when you get shown it and jump through all the normal hoops. (Almost the same hoops you are jumping though to install aaBridge).

Take care when you get to

this screen >>>>

Uncheck whatever they are also trying to get you to install. Shown here in purple.

Tut-tut BIG Corporate – you should know better.

aaBridge will normally now launch for the first time. Whether it does not there will be an aaBridge icon on the desk top.

<end of page>

When **aaBridge** runs (you may need to **Dblick** the desktop icon) you will see a window like the one below.

aaBridge is old fashioned in that the, check for new versions is done manually. Click on the menu item **Help & About** and click on the website option shown in the image with a purple marker.

Especially if you are a regular user it is worth checking every month or so.

If you are using **aaBridge** for the first time it you are advised to reader the **Moving Around** section see the grey column and look top left to click on it.

Drag & Drop to Play Bridge Movies

If you wish to use **aaBridge** to play Bridge Movies that you already have on your computer then – the way that will **always** work – is to go to the bridge movie folder on your computer. Then select a bridge movie and then **drag & drop** it on to an open **aaBridge** window like the one shown above.

Double Click to Play Bridge Movies

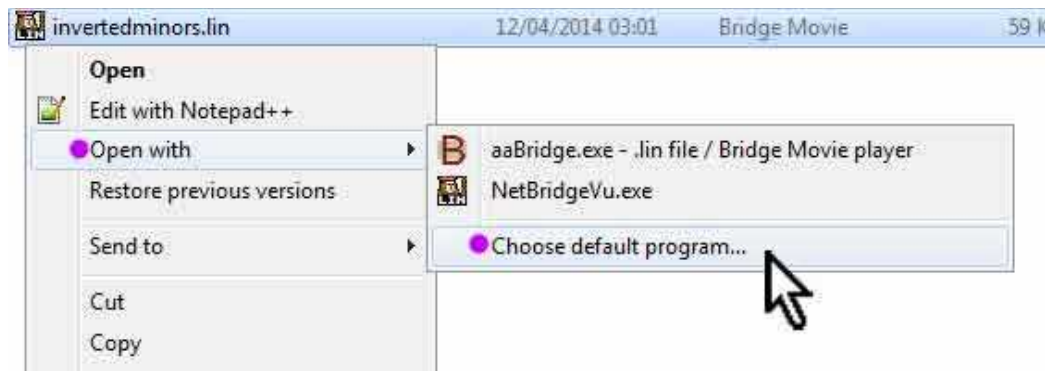

If you double click on a bridge movie that is already  `invertedminors.lin` on your computer it will launch and play in aaBridge.

On Windows there is always a chance that another program will launch and try to run the **.lin** file (otherwise known as a bridge movie).

Choosing the program that plays lin files

If aaBridge does not launch when you double click on the bridge movie file then it may be because another program is currently selected to open **.lin** files.

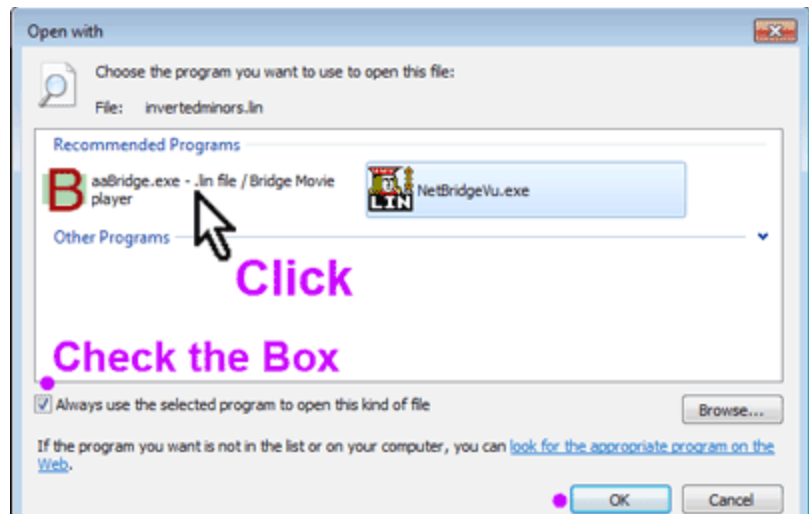

Point at an Bridge Movie (**.lin** file) with your mouse. Use the right mouse button to bring up the menu then select **Open with** and then click on **Choose default program...**

When the window opens select **aaBridge** and make sure that the checkbox is checked and click OK.

Your **.lin** file will then open in aaBridge and in future it will be aaBridge that is used to launch **lin** files when you double click or open movies via web links.

<end of page>

How to play Bridge Movies from on the Web

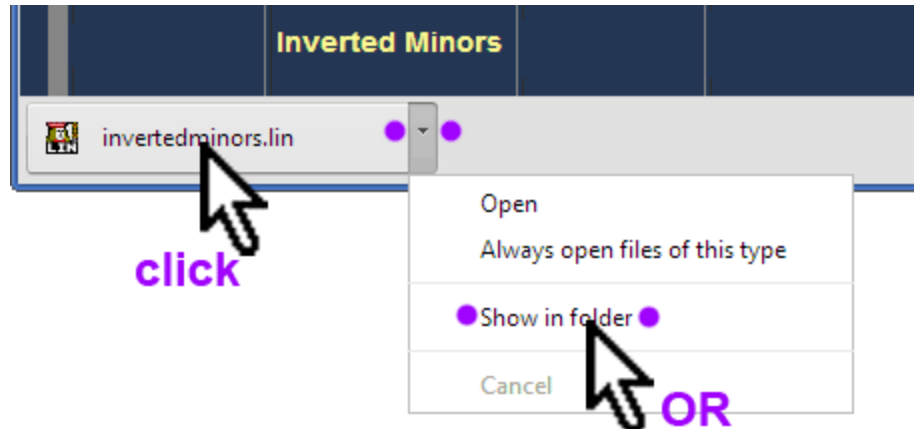

In your browser go to your favorite Bridge Site that has good Bridge Movies. Click on a Bridge movie link.

Different browsers do different things.

Chrome

On Chrome you get a moving image of the file in the bottom left as the file downloads.

Once it has fully arrived you can **click** on the icon/button and it will launch.

OR

Click on the download drop box selector (purple dots) this will open your downloads folder where you can Click on - **Show in folder**.

This will open the downloads folder. In this folder you can use the procedure given earlier to set aaBridge as the program that runs .lin files – Dbl Click to open.

Other Browsers

Some give you a choice between Open and Save, some only let you save. Open will do what you want and launch the lin file in your chosen lin file player. If you do a Save then again you want to show (go to) your downloads folder and there dbl-click the .lin file.

Last Resort

If that does not work! you can use the 'always works' method of dragging the new file from the downloads folder and dropping it on an open **aaBridge** window.

<end of page>

Hints on Using aaBridge

The **navigation bar** is the line of bumps, some of which may have characters on, which you can see at the bottom of the aaBridge screen.

You can click anywhere on this line and you will be jumped immediately to that part of that bridge movie. The bumps represent markup points that the author has put into the file to give it some structure. With aaBridge you are not limited to just the bumps you can click between the bumps and jump to that position.

When you are in a book with multiple chapters, each chapter is its own bridge movie, then you will see in the grey bar on your left the names of each chapter. Click on one to jump there.

You can also use the forward and backwards arrows on your keyboard. When you get to the end of a chapter then the forward arrow will move you to the next chapter. The same applies if you are going backwards.

Step and Flow buttons

In a bridge movie's you move forward to the next stopping point, often called a page, by clicking on the Step and Flow buttons. Additionally, if can't play all bidding is being shown to you then the flow button will show each card will bid being played a very short pause after each.

You can set the duration of the pauses by using the time the sliders at the bottom of the screen, grab and raise the horizontal divider.

You are strongly encouraged to go through all the options. They were put there for you. Grab the vertical divider on the right and move it left.
